High Flexibility Tight Control

SIPL ERP Solution

SIPL ERP solution is an end to end system that works from CRM all the way to SRM. Manage your customer relationship at the same time manage your supply chain relationship by eliminating the gap between the sales force and the purchase force keeping your production balanced. Also find out your base cost ratio and ways to enhance it through better management of the business process.

TES Solution

SIPL TES is basically Trade Easy System. As the name itself specifies, it is a complete software solution for Traders and Dealers that have hundreds or thousands of transactions on a daily basis. These transactions include retail as well as wholesale dealings of product lines including but not limited to trans-aqua data transition.

MRP Solution

SIPL MRP solution is a part of the vast ERP solution that works for the SME sector that is usually dependant upon the core production and the purchase costing. With the MRP solution, you can easily control purchase and production costs at the same time keep a tab on your stock valuations, third party stocks and most importantly all the government statutory reporting.

TMS Solution

SIPL TMS is basically Transport Management System – a complete Logistics module. As the name itself specifies, it is a complete software solution for Transporters and fleet owners that have multiple generations of LR receipts and movement of material on a contractual basis. Delivery acknowledgement along with drop load at FCL or LCL with the landing documentation to keep a keen eye on the financial impact of load to profit ratio or vehicle to profit ratio is maintained precisely in the system.

CMS Solution

SIPL CMS is basically Content Management System. As the name itself specifies, it is a complete software solution for institutions as well as small businesses who cannot afford the luxury of big time advertisement costs and can neither afford the marketing costs of their products. This does not imply that their fundamental right of business growth cannot be achieved. The Web has been an excellent means in today's world to achieve this dream path for the Small scale sector. A content management system allows you the flexibility to control your data and the exposure to the open market. Reach millions of people at extremely minimum costs. No monthly or yearly subscriptions and no ongoing costs.

FRTS Solution

SIPL FRTS is basically Field Report Tracking System. As the name itself specifies, it is a complete software solution for the force that is deployed on the field. Real time reporting as well as competition management is managed on a very higher scale of platform for better usage of resources and money. Know what your personnel are doing out on the field, Administer the costs, manage and manipulate the outcome, get better results thro core competency deputation, Control and allow the freedom of sector management keeping the Revenue flow wide open, Operate from anywhere where you can find Internet connectivity, maybe a small cyber café or a USB wireless card.

DMS Solution

SIPL DMS is basically Document Management System Security represents two distinct concepts when dealing with documents and information. First, proprietary content should always remain beyond the reach of unauthorized personnel. Second, your information should be protected from unexpected disasters. These have been difficult to achieve in a paper-based archive, but they're easy to obtain with "FILE IT".

Document Retrieval in the 21st Century doesn't mean you'll be leaving your desk to walk to a file cabinet. Those days are behind you. Instead, you'll remain comfortably seated and perform a quick search right from your workstation.

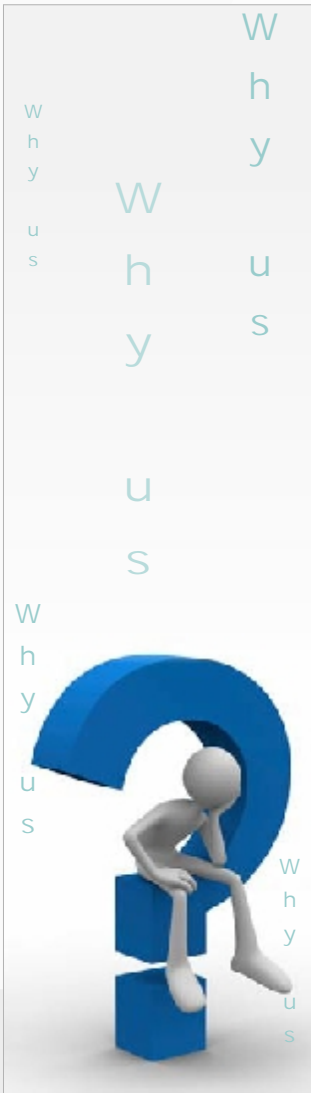

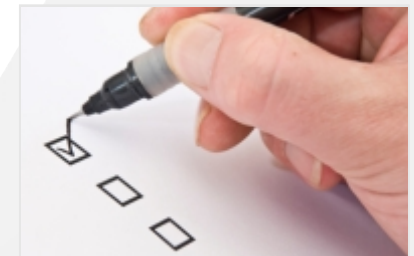

How many times have you found yourself searching endlessly for a document and never finding it? What began as a quick stroll to the file cabinet rapidly evolved into a fishing expedition for that misfiled or sometimes lost record. "FILE IT" will make sure that you do not lose it.
