

SIGNODE SCL

Combination Strapping Tool

For use with Magnus and Apex steel strapping

Features and Benefits

Light weight and ergonomic - at just 3.5kg the SCL offers faster, easier operation for greater productivity and reduced operator fatigue.

Robust and reliable - the all-metal construction and patented design features deliver maximum reliability and durability.

High performance - powerful enough to apply Signode's Apex steel strapping up to 0.63mm and Magnus steel strapping to 0.58mm thickness.

Sealless strapping - secure strapping without metal seals saves money and reduces component stocks.

Fast secure strap changeover - strap sizes can be changed quickly and easily between 13, 16 and 19 mm using integral guides

Fewer parts - easy-access 'open' design makes parts simple to replace with Torx wrench supplied.

SIGNODE SCL Combination Tool

For use with Magnus and Apex steel strapping

Design, function and operation

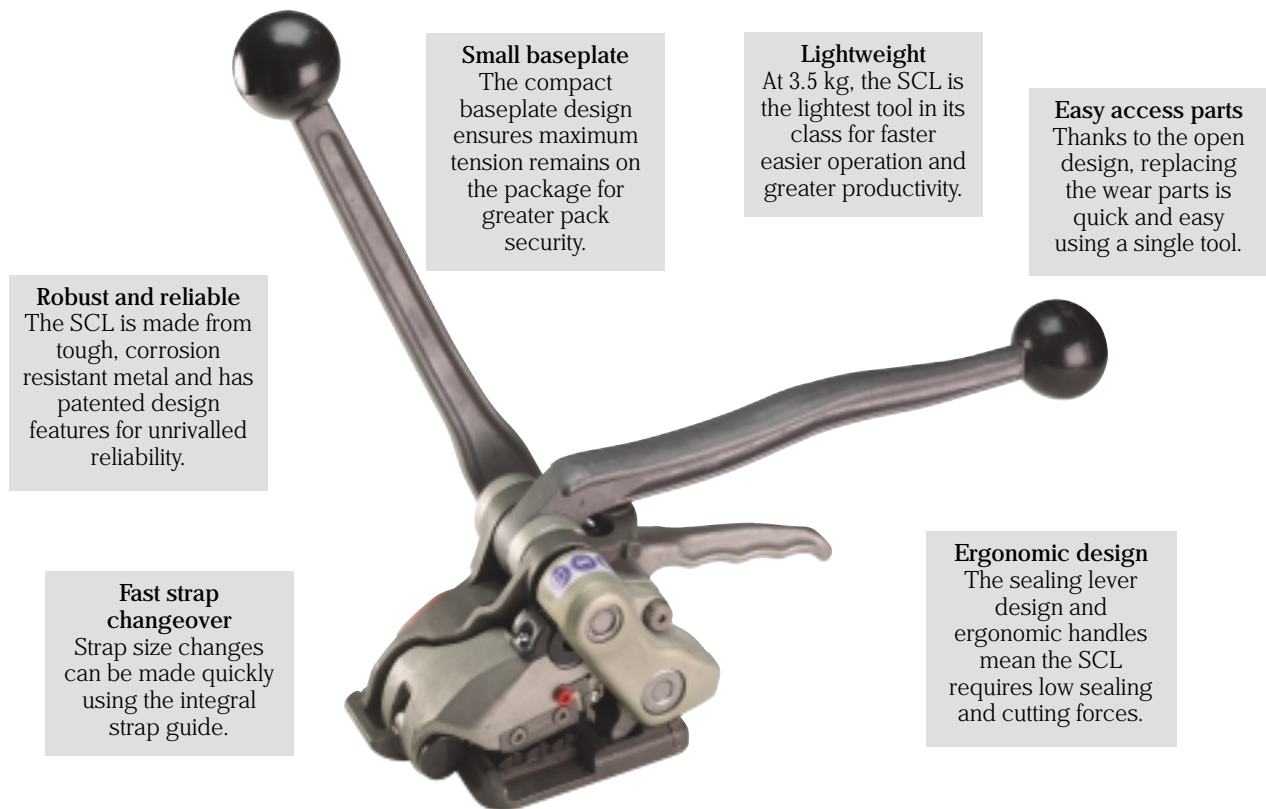

The SCL is a high performance sealless combination tool for use with both Apex and Magnus steel strapping. This versatile tool is ideal for a variety of light and medium duty applications including fabricated metal, timber and construction products. Weighing only 3.5 kg, the SCL is very easy to use to maximise productivity without causing fatigue. At the same time it is powerful enough to apply heavy-duty steel strap at tensions up to 6500 N. As the lightest tool in its category, the SCL offers faster, easier operation while the ergonomic design requires low sealing and cutting forces. The compact baseplate also ensures maximum tension remains on the package - even for smaller packs. The tool can be used for both horizontal and vertical operation and is easy to carry around different workstations. With its inherent corrosion

resistance, it can even be used for outdoor applications.

Quality materials, hardened surfaces on all wear parts and high corrosion protection give the SCL a long service life. Superior reliability is ensured by patented features such as the punch-and-die design.

Because the sealing lever is staggered away from the strap line, the SCL offers fast secure strap insertion and a high operating speed. The strap size can be changed quickly and easily between 13, 16 and 19 mm just by switching the strap guide - no extra parts are needed to change strap sizes.

With fewer parts than any other tool of its type, the SCL couldn't be simpler to service. Its open access design means all wear parts can be replaced by the operator in minimum time without any special tools.

Dimensions and Performance

Weight	3.5kg
Base length	104 mm
Tool length	(tbc)
Tool height	(tbc)
Tool width	(tbc)
Part number	0021000

Strapping

The SCL is designed for use with Signode's 0.63mm Apex and 0.58mm Magnus strap in both 13mm and 19mm sizes. Apex is a cold rolled steel strap for general applications. Magnus, Signode's heavy duty steel strap, is a medium carbon heat treated steel strap designed for more demanding applications where high impact resistance is required.

To provide the appropriate level of corrosion resistance, Magnus and Apex strap is available in a three finishes - blue and waxed, black painted and waxed and zinc painted and waxed.
