

### Suspension systems for combination tools

#### Tool suspension systems

##### Balance arms

A balance arm counterbalances a strapping tool for easy positioning on or against a package. Each balance arm is designed for specific combination tools.

The inside spring counterbalances the tool so well that only a light touch from the operator will move the tool where needed. The base of the tool remains parallel to the package.

See chart below for the adaptor needed to secure the tool to the balance arm.

#### Universal suspension brackets and hooks

Universal suspension brackets and hooks are used to suspend combination tools in their working positions from overhead tool balancers. By keeping tools within easy reach, you can save time and effort, and generally speed the strapping operation.

# Tool Suspension Systems

## For plastic and steel strapping

### Overhead tool balancers

Tool balancers are the easiest and most efficient way to suspend strapping tools from a fixed ceiling bracket, monorail, jib or bridge crane.

\* Ratchet lock halts cable at desired position, prevents creep. The lock can be released by a tug and can also be disengaged.

### Jib crane

Signode's JN-15, Part No. 084165, is a 15 ft. (4.6 m) jib crane used to suspend pneumatic combination tools overhead. It handles steel strapping in widths up to 1-1/4" (31.8 mm).
